Duties: Temporary Cad. Draughtsman / Engineer pipework, Handrailing & conveyors

Jun.99/ now

Self Employed Draughting & Engineering Work using autocad and Tekla 3d mainly structural steelwork and stairs.

Technical Experience

Overseeing the design, detail and actual manufacture of all varieties of road trailers and associated products. Fabrication of main beams, frames and sub-assemblies along with the fitting out of steel, air, fluid and rubber suspended trailers. Air and electrical layouts for trailers. Designing and manufacturing jigs for sub-assembly and trailer production. Ensuring technical records are kept on all company's activities. I am thoroughly conversant with all aspects of construction and use requirements, plating and testing, British standards, I.S.O. standards, codes of practice, SMMT standards, E.E.C. requirements, and design practices within the trailer industry. Dealing with Swansae on D.O.T. standards lists. Compiled computer programs to do E.E.C. brake calculations and evaluate stress and deflection levels on chassis frames. Set up quality assurance system for Ministry of defence. Making decisions for buying on material selection. Implementing systems to comply with I.S.O. 9000.

Sales Experience

Handling all sales office duties which include quotations, order acknowledgements, and technical queries. In charge of sales facility covering service, repair and conversion work on commercial vehicles.

Managerial Experience

In charge of service facility with over 20 employees. Organising work loads and preparing schedules. Compiling computer spreadsheet systems for monthly production schedules. Industrial relations. Handling warranty claims. Travelling to site and organising subcontractors when necessary. Attending meetings at other group factories. Visiting suppliers to ensure delivery requirements and quality standards are maintained.

General Experience

While obviously I have an excellent knowledge of the haulage industry, I also have a good, general all round appreciation of mechanical and electrical engineering. In my younger years I spent much of my spare time doing contract draughting work on house plans, structural steelwork and general mechanical engineering. I have a good working knowledge of the latest autocad. I am very much a hands on person and there is nothing I enjoy better than being in the shop floor and physically helping out with some operation. I hope this gives a clear picture of my talents and abilities however I would say my three greatest assets are total dedication, enthusiasm and determination.

Hobbies

Masters swimming, keep fit, gardening and using the computer
